WORK EXPERIENCE

Software Engineer

Power Electronics

April 2023 – May 2026

R&D Department. Solar area.

Firmware development for solar inverters and control systems in photovoltaic plants, working on STM32 micro-controllers with bare-metal and RTOS environments.

- Reduced RTOS task stack usage by 30%–50%, optimizing memory on STM32 microcontrollers.
- Optimized Modbus TCP request handling, cutting CPU usage under load (40,000 req/s) from 80% to 17% with no dropped responses.
- Redesigned embedded file-system access, cutting access times by over 50% and adding a scheduled purge (daily/monthly) that safely clears thousands of files under continuous operation.
- Built and maintained industrial communications in C with hardware abstraction layers (HAL): Modbus RTU/TCP, UART, I2C and SPI.
- Automated the test suite: ~50–80 unit tests per module (Ceedling, thousands in total) reaching 100% line and branch coverage via standard-library *mocks/fakes*, plus hundreds of on-hardware integration tests (pytest); all in CI.
- Reviewed merge requests across a 12-person team, catching bugs and proposing improvements before integration.

Predoctoral researcher

Polytechnic University of Valencia + CSIC + Hospital La Fe + AVI

January 2023 – April 2023

Medical Imaging and Therapy Systems i3M

Researcher in the R&D line: **Acoustic Metamaterials for Ultrasound Histotripsy treatments.**

Project: New generation of smart metasurfaces based on additive manufacturing for strategic applications in telecommunications (Metasmart). Funded by the Valencian Agency for Innovation (Reference: INNEST/2022/345).

- Ultra-close focus acoustic lens design.
- Prototype manufacturing.
- Experimentation with ex-vivo tissues.

Predoctoral researcher

Polytechnic University of Valencia + CSIC

📅 July 2021 – July 2022

📍 Medical Imaging and Therapy Systems i3M

The main objective is to conduct research and development of acoustic metamaterials for use in architectural applications and medical imaging.

Goals achieved:

- Developed acoustic metadiffusers reaching a diffusion coefficient of 0.8 with a thickness $10\times$ smaller than traditional diffusers.
- Simulation of the acoustic diffusers and validation of results (MATLAB & COMSOL).
- Two publications in national and international congresses:
 - Tecniacústica - **Beyond Schroeder diffusers using acoustic metasurfaces**
 - Euronoise - **Sound diffusing metasurfaces based on elastic plates and membranes**
- Designed and 3D-printed (resin) slitted-tube waveguides with numerically-computed slits (2–3 cm tubes, ~ 0.5 mm slits) that increased ultrasound directivity and range $\sim 15\times$ in air, validated experimentally.
- Validated experimental results against those obtained in simulation.
- Advisor of the Master thesis of a student of the Master's Degree in Acoustic Engineering of the UPV.

Researcher in European project

Higher Polytechnic School of Gandia

📅 February 2020 – July 2021

📍 Complex Media Acoustics Group of IGIC

Implement and experimentally validate a sound mitigation method, applicable to a real space vehicle launch configuration (VEGA), that results in a significant decrease in sound pressure levels generated in the launch area during spacecraft liftoff.

Project funded by ESA (European Space Agency) with reference ESA AO/1-9479/18/NL/LvH, in collaboration with: CNRS/Laboratoire d'Acoustique de la Université du Mans; COMET Ingeniería; Spanish National Research Council (CSIC) and Polytechnic University of Madrid.

All project objectives were completed at 100%:

- Designed the optimum acoustic-metamaterial geometry, achieving near-total absorption ($\alpha \approx 1$) across 200–500 Hz with a subwavelength design (ratio $\lambda/\text{thickness} \approx 16.5$ vs ~ 2 conventional), validated on real lab prototypes.
 - Simulation of a real environment to validate design performance (MATLAB, COMSOL & Python).
 - Designed and 3D-printed the first prototype; for the large-scale version designed the injection-molding model and sourced the manufacture of 600 modules with a supplier.
 - Development of software for acoustic measurements according to ISO 10534-2 and ASTM E2611 standards. **A|Lab**.
 - Design and development of a 3-axis robotic system to perform experimental measurements. Photos and some information here: **NEWS**.
 - Results validated and accepted by ESA.
 - Three publications/presentations at international congresses (Euronoise and ECSSMET) and one at a national congress (Tecniacústica):
 - Euronoise - **Perfect broadband sound absorber metamaterial for noise reduction in a rocket launch**
 - Euronoise - **Application of metamaterials to control noise scattering during space vehicle lift-off**
 - ECSSMET - Launch sound level characterisation and mitigation: numerical modelling framework and metamaterial proof of concept
 - Tecniacústica - **Acoustic field prediction during the launch of rockets**
-

Research internship

Dep. of Physics, Systems Engineering and Signal Theory

📅 February 2018 – July 2018

📍 University of Alicante

Internship in different research projects in the **Applied Acoustics Group**, belonging to the University Institute of Physics Applied to Sciences and Technologies of the Higher Polytechnic School of Alicante.

Goals achieved:

- Simulation of acoustic models.
- Acoustic measurements by means of a LabView-controlled robotic system.
- Investigation of the acoustic radiation efficiency (Vibration-borne noise) of metallic plates for an initial study of ship noise emissions in water. Carried out in collaboration with SAES, here you can read a news item on the subject: **NEWS**.
- A publication at a national congress:
 - **Tecniacústica - Comportamiento vibroacústico de contenedores cilíndricos en aire**

Founder and Vocal Member

AμTech

📅 September 2016 – July 2018

📍 University of Alicante

Association based at the Higher Polytechnic School of the University of Alicante. Founded in 2016. Promotes project-oriented microcontroller programming knowledge.

Activities performed:

- Group classes of reinforcement and extension of the subject "Digital Electronic Systems" of the Degree in Sound and Image Engineering of the University of Alicante.
- Laboratory organization and planning (located at the Colegio Mayor).
- Communication and Public Relations.

Sound technician

Acusticox

📅 June 2011 – February 2018

📍 Cox, Alicante

Installation and tuning of audio equipment for live events and permanent installations; FOH technician.

EDUCATION

Formal education

PhD in Health and Wellness Technologies

Polytechnic University of Valencia

📅 September 2020 – 2023 (not completed)

📍 Medical Imaging and Therapy Systems i3M

Title Industrial and biomedical applications of metamaterials for the control of acoustic beams. In this project, we propose to combine new air-coupled ultrasound transducers with hyperbolic metamaterials to design vision systems that exceed the imaging capabilities of traditional systems.

Description Research in acoustic engineering applied to biomedicine: biomedical signal processing, ultrasound characterization, and computational modeling and simulation of acoustic phenomena. I redirected my career toward industrial software development before completing the doctorate, applying my foundation in programming, data analysis and analytical problem-solving.

Academic record

Master's Degree in Acoustical Engineering

Polytechnic University of Valencia

📅 September 2018 – June 2019

📍 Higher Polytechnic School of Gandia

Degree obtained with honors in: Fundamentals of Acoustics, Acoustic Isolation, Musical Acoustics, Signal Processing in Acoustic Engineering, Ultrasonics and Acoustic Simulation Techniques.

Final Master's thesis entitled "Difusores acústicos basados en resonadores de membrana y placa" ("Acoustic diffusers based on membrane and plate resonators"), qualified with honors with special mention.

Diploma

Academic record

Degree in Telecommunication Engineering in Sound and Image

University of Alicante

📅 July 2018

📍 Higher Polytechnic School

Degree obtained together with the 2 specializations: Acoustic Engineering and Audiovisual Technology.

Final Degree Work entitled "Estudio de la relación campo directo/reverberado; útil/perjudicial" ("Study of the direct/reverberated field relationship; useful/harmful").

Diploma

Academic record

Certificate of Higher Education in Electronics Technician & Superior Sound Technician

IES Salesianos (San José Artesano) | IES Luis García Berlanga + Ciudad de la Luz

📅 2009 | 2011

📍 Elche | Alicante
